Explorers

A dental explorer or sickle probe is an instrument in dentistry commonly used in the dental armamentarium. A sharp point at the end of the explorer is used to enhance tactile sensation.

Large diameter handle 9.5mm is used for all explorers. The thin, unbreakable, yet flexible tips from a special steel alloy guarantee an extremely long life. This section includes the most commonly use diagnostic explorers. All explorers are,

Made from Stainless Steel Material

CE-009
D5 Explorer,
Double Ended

CE-010
11/12 Old Dominion
University Explorer, DE

These are double-ended instruments with an explorer on one end and a probe on the other end. An Expro is excellent for dental examinations and charting. This section includes the most commonly used Expros. These are,

Made from Stainless Steel Material
Ultrasound Resistant &
Completely Sterilizable
Color Coded

Clinical probing depths and measurements of attachment loss obtained with periodontal probes are a practical and important method of determining a patient's periodontal status. When selecting a probe for measuring pocket depth, you should consider selecting a probe that has markings that you are familiar with. This section includes the most commonly used Probes.

Stainless Steel Material
Ultrasound Resistant
completely Sterilizable

The thin, unbreakable, yet flexible tips from a special steel alloy guarantee an extremely long life. All our Periodontal probes are prepared by a high-speed cutting machine. Working parts are in very fine to very precise dimensions and the color markings are (do not dissolve or fade off) ultrasound-resistant.

H6/H7 Hygienist Anterior Sickle Scaler

Super-thin, contra-angle design.
Very effective for interproximal areas.
Shank angulation provides accessibility to all anterior and premolar surfaces.
Made with stronger and longer-lasting Stainless Steel

SYG7/8 Younger Good Universal Curette

Blade designed with two cutting edges and a rounded toe for use on all surfaces.
Particularly use for the removal of supragingival / subgingival calculus.
Stainless steel
Completely sterilizable
Super-durable to stay sharper longer.

Gracey Curettes - Standard

Gracey Küretten Standard
Curetas Gracey Estándar

In the following chart you can find the exact application areas for the various Gracey Curettes.

Gracey Curettes - Small

In the following chart you can find the exact application areas for the various Gracey Curettes.

Gracey Curettes - Small

The terminal shank of the Gracey curette Small is 3mm longer and the work endpieces are 50% shorter. This modification allows better access to the narrow root surfaces.

Posterior Columbia Universal Curette blade designed with two cutting edges and a rounded toe for use on all surfaces. Use for the side tooth area.

Langer Universal Curettes

The Langer Curette design combines the benefits of a Universal Curette blade, and the shank designs of area specific Curettes. A Universal blade allows Instrumentation on both the Mesial and Distal surfaces with one Instrument.

McCall Universal Curettes

Pointed McCall Curette designed for the removal of supragingival calculus
McCall scalers have tapered, pointed working ends and are highly suitable for interdental cavities.
Made from surgical grade stainless steel.
Large diameter handle design, 9.5mm
Completely sterilizable
Super-durable to stay sharper longer.

CE-076 2 Lwanson Spring Caliper, for wax

CE-077 1 Lwanson Spring Caliper, 10cm

CE-078 Castroviejo Caliper, Straight 9cm

CE-079 Weiss Modified Castroviejo Caliper, Cvd. 17cm

CE-080 Castroviejo Caliper, Angled 18cm

CE-081 Castroviejo Caliper, Straight 18cm

CE-086
Bone Caliper Gauge

The Kramer-Nevins Chisel is used to remove and recontour bone with 2mm working ends. Made with surgical grade stainless steel.

The Rhodes Back Action Chisel is designed for removing bone adjacent to the tooth without causing trauma and is especially useful on the distal of last molars. It is used in a pull stroke. Working ends are 3.8mm wide.

Periodontal Chisels & Towel Clamps

Parodontale Meißel & Handtuchklemmen
Cinceles periodontales y pinzas para toallas

Sharp bone Chisels designed for secondary sulcular incisions in flap procedures that facilitate removal of remaining connecting fibers on the tooth. Also used to refine osseous topography in ostectomy and osteoplasty techniques.

CE-094 2 OchsenBein Periodontal Chisel, SE, 5mm

Backhaus Towel Clamp, 9.0cm

Backhaus Towel Clamp, 12.5cm

Surgical Curettes - Lucas Smooth

These Lucas Surgical curettes are designed for curettage, cyst removal and tooth socket debridement with 2.2mm, 2.5mm, 3.5mm & 4.7mm working ends.

Made with surgical grade stainless steel.
Hallow Handle, light weight,
9.5mm diameter
Completely Sterilizable

20. Surgical Curettes - Lucas Serrated

These Lucas Surgical curettes are designed for curettage, cyst removal and tooth socket debridement with 2.2mm, 2.5mm, 2.8mm, 3.5mm & 4.7mm working ends.

Surgical Curettes - Miller Spoon Shape

Chirurgische Küretten Miller Löffelform
Curetas Quirúrgicas Miller Forma Cuchara

These Surgical curettes are designed for curettage, cyst removal and tooth socket debridement with 3.4mm, 2.9mm, 3.6mm & 4.2mm working ends.

Made with surgical grade stainless steel.
Hallow Handle, light weight,
9.5mm diameter
Completely Sterilizable

Surgical Curettes - Molt

These Surgical curettes are designed for curettage, cyst removal and tooth socket debridement with 3.0mm, 3.5mm, & 7.0mm working ends.

Luxating Elevators Set - Plastic Handle

Luxating Aufzüge Set-Kunststoffgriff
Juego de elevadores de luxación con mango de plástico

Today's modern implantology demands that immediate implantation takes place after gentle and atraumatic tooth extraction. Therefore it is increasingly important that during the tooth extraction the hard and soft tissue structures are already handled very gently and atraumatically. Luxating Elevators set assure a further development of Periotomes and thus enable unique mesial and distal manipulation of the root structures. This prevents fracturing of the buccal and labial bone lamella, which is extremely important for the implant insertion. The luxating elevators set is an ideal complement to the conventional extracting instruments for the gentle extraction of non-restorable teeth.

- Light Color Coded handle design for fatigue-free working
 - The handle size allows for careful gentle and controlled operation as well as direct power transmission to avoid tooth and root fractures
 - Atraumatic removal of teeth without damaging nearby structures
- The alveole is atraumatically expanded by the special flat work tips and the periodontal ligaments are gently severed by slight rotary motion.

Working Procedure:

1. Position the luxating elevator to the side of the tooth.
 2. Enlarge the alveole
 3. Sever the ligament
 4. Remove the tooth with a rotating circular motion from its socket
- This results in minimal tissue damage

Luxating Elevators Set - Steel Handle

Luxating Aufzüge Set-Stahlgriff
Juego de elevadores de luxación con mango de acero

This section includes the Luxating Elevator set with Stainless Steel Handle.
Long & light weight handle design provide excellent smooth grip with controlled force transfer.
The working procedure is similar as mentioned in the previous section.

Bernard Elevators - Syndesmotomes

Bernard Elevators-Syndesmotome
Bernard Ascensores-Syndesmotomes

Bernard Root Elevators are particularly suitable for the excision of fractured roots or root fragments. They represent a combination of root tip elevators and luxating elevators. The inner side is concave and the laterals edges are for cutting. This allow for rotatory movements, and when applying slight pressure, the ligaments can be separated and the remaining root fragments can be loosened.

This section includes a set of five Bernard Root Elevators, including Left, Right, Straight, Mesial & Distal form. All elevators are made from, Surgical Stainless Steel
Hallow handle, light weight
Completely Sterilizable

Posterior Flared Tip Elevators

Elevatoren mit hinterer ausgestelltter Spitze
Elevadores de punta acampanada posterior

This section includes a comprehensive set of Posterior Flared Tip Elevators. These elevators used to loosen the tooth from the periodontal ligament and ease extraction, particularly used for Upper Posterior Roots and Upper 3rd Molar.

CE-149 46 Elevator, Smooth, Distal, 2.75mm

CE-150 46R Elevator, Smooth, Mesial, 2.75mm

CE-151 77 Elevator, Serrated, Distal, 3.75mm

Atraumair Forceps - Upper Molars

Atraumair Pinzette-Obere Molaren
Fórceps Atraumair-Molares Superiores

These Forceps, with parallel grasp on the neck of the tooth and deep reach in the alveolar region, provides a secure hold for the extraction of the tooth. All Atraumair forceps feature a matte finish for enhanced contrast and reduced light reflection. Unique hold design help reduce the weight of the forceps and provide an increased comfort and control. Following are key features of these,

- Unique hold design reduced weight of the forceps, providing increased comfort and control
- Matte finish for enhanced contrast and reduced light reflection
- Enhanced beak geometries and longitudinal beak serrations provides a firm, secure grasp of the crown and root reducing the risk of crushing or fracturing the tooth
- Laser marked hinge for greater visibility when bagged for sterilization
- Surgical Stainless Steel & Completely Sterilizable

CE-181 67 Atraumair Forceps, Upper Molars

Bone Scrapers

Knochenschaber
Raspadores de huesos

These are manual bone harvesting instruments. These have large working area for bone curettage so that large volume of bone substance can be obtained. The instrument's widened handle fits perfectly in the hand to ensure that the instrument is supported and controlled securely during bone curettage. The sharp cutting edge ideally meets the surgeon's needs in handling the jaw under different anatomical conditions.

CE-239 Bone Scraper, Angled 15.5cm

Bone Grafting Instruments Set

Knochentransplantations-Instrumente-Set
Juego de instrumentos para injertos óseos

This set includes bone grafting applicators, packer and scoop and Granulate Plugger.

All grafting instruments are made from surgical stainless steel. The working points are coated with Black Titanium Nitride.

They are completely sterilizable.

This is a combination of a Compactor & Applicator, most suitable for augmentation surgery

Titanium Nitride Coating

Black TiNi coated working points provide

- Optimal edge retention
- Reduced light reflection
- Enhanced contrast and
- Visual acuity at the surgical site and underlying tissue.

This applicator ensures the optimal blending and transportation of bone grafting material. The narrow and angled workpiece is available for smaller quantities, and the wider workpiece for larger quantities.

Bone Grafting Instruments

This section includes bone grafting applicators, compactors and bone grafting Condensers. All grafting instruments are,

Titanium Nitride (TiN) Coating:

Black coated working points provides optimal edge retention, reduced light reflection and enhanced contrast and visual acuity at the surgical site and underlying tissue.

Sterilized in all Commercial Sterilizers

Large diameter handle (9.5mm) for enhanced ergonomics, tactile feel and optimal clinical performance.

Tunneling Instruments Set

Tunneling-Instrumente-Set
Conjunto de instrumentos de tunelización

In microsurgery, Tunneling Instruments find their application in the preparation of laps or subsequent reconstructions of the alveolar ridge or for root coverings with a connective tissue graft. This tunneling instruments set allow a minimally invasive tunneling preparation to avoid large openings. Due to the fine shaped raspatories tunneling incisions in the tissue are possible.

This set includes the Micro Surgical Needle Holder & a Micro Surgical Tissue Plier, both have fine Diamond Dusted working tips. A perfect set for surgical and tunnelling procedures.

VISTA Tunneling Set

Vestibular Incision Subperiosteal Tunnel Access (VISTA), Progressive apical displacement of gingival tissue away from the CEJ results in gingival recession and root exposure. The clinical consequences include root sensitivity, root caries, cervical root abrasions, inadequate plaque control, and aesthetic concern.

Minimal Invasive Needle Holders

Minimalinvasive Nadelhalter
Portaagujas mínimamente invasivo

Microsurgical Velvart Needle Holders are used for very fine sutures. Special lock design prevents tangling of the seam. This allows the needle to be guided through coarse gingival tissue with controlled grip pressure.

Needle Holders - Mayo-Hegar

Nadelhalter -Mayo Hegar
Portaagujas -Mayo Hegar

These Mayo-Hegar Needle Holder are a ratcheted, finger ring instruments available in a wide range of lengths, and used in multiple types of surgical procedures. Due to versatility, it is one of the most commonly used surgical tools for both human and animal procedures. Shorter length products may be used in oral, gynecological, or dermatological procedures, as well as with small animals. Larger lengths of this product may be used for deep tissue suturing such as in bariatric procedures, or in large animal procedures.

Periosteal Prichard Black Line is coated with TiNi solution. It is used for reflecting and retracting the mucoperiosteum after incisions of the gingival tissue. Black TiNi coating provides optimal edge retention, reduced light reflection and enhanced contrast and visual acuity at the surgical site and underlying tissue.

Large diameter handle for enhanced ergonomics, tactile feel and optimal clinical performance. Longevity and corrosion resistance afforded by handcrafting from the finest grade surgical stainless steel.

3 Prichard periosteal elevator is a double end dental instrument used for used for reflecting and retracting the mucoperiosteum. Featuring two blades, one large flat blade and one narrow sharp blade on round tip.
4.7mm/11.0mm.

Periosteal Elevators are designed for reflecting and retracting the mucoperiosteum after incisions of the gingival tissue. Periosteal elevators are mainly used to lift full thickness soft tissue flaps. The tips require protection and need to be kept very sharp otherwise shredding of the flap can happen.

Periosteal Elevators are designed for reflecting and retracting the mucoperiosteum after incisions of the gingival tissue. Periosteal elevators are mainly used to lift full thickness soft tissue flaps. The tips require protection and need to be kept very sharp otherwise shredding of the flap can happen.

Flaps make it easy to visualize the area of interest during multiple extractions, particularly cat teeth, and in the creation of sliding flaps and other flaps in periodontal and oral surgery.

Periosteal Elevators are designed for reflecting and retracting the mucoperiosteum after incisions of the gingival tissue. Periosteal elevators are mainly used to lift full thickness soft tissue flaps. The tips require protection and need to be kept very sharp otherwise shredding of the flap can happen.

Periotomes

These Periotomes are designed to facilitate the removal of teeth with minimal damage to the surrounding alveolar bone by severing the periodontal ligament with the use of the sharp, serrated, thin clinically designed blades. Large diameter handle for enhanced ergonomics, tactile feel and optimal clinical performance. Longevity and corrosion resistance afforded by handcrafting from the finest grade surgical stainless steel. These Periotomes are **TiNi Coated**. Black TiNi coating provides optimal edge retention, reduced light reflection and enhanced contrast and visual acuity at the surgical site and underlying tissue.

Sinus Lift Maxi Set - Maxillary Sinus Lift Instruments

Kieferhöhlenlift-Instrumente
Instrumentos de elevación del seno maxilar

This elevator allows obtaining a sufficient lateral sinus lift, guaranteeing placement of appropriately sized implants in situations of lack or absence of residual bone.

This sinus elevator allows optimal access in order to gently separate the Schneiderian membrane and elevate it. The smaller size of the operational portion allows separating the membrane also in micro bone windows.

This Curettes is a combination of Kramer-Nevins Obtuse and Acute Curettes.

Used during a sinus lift procedure to separate/reflect the Schneiderian membrane from the maxillary bone and to elevate the membrane.

All instruments are,
Made from Surgical Stainless Steel
Completely Sterilizable

These sinus lift curettes are used during a sinus lift procedure to separate/reflect the Schneiderian membrane from the maxillary bone and to elevate the membrane. These Sinus lift instruments, both curette ends are dull to prevent damage to membrane.

All instruments are,
Made from Surgical Stainless Steel
Completely Sterilizable

This is a comprehensive instruments set used for implant surgery. It includes 6 basic surgery tools, Scissor, Needle Holder, Micro Tissue Plier, Scalpel Handle, Sinus lift Curette & Periosteal Elevator. All instruments are made from surgical stainless steel & completely sterilizable.

Rubber Dam Forceps - Ivory Forceps

Kofferdamzange-Elfenbeinpinzette
Fórceps para dique de goma - Fórceps de marfil

Ivory Rubber Dam Forceps are used for placement and removal of rubber dam clamps on/from the tooth. Special grooves on the working ends to open the clamp to make sure so that they can not slip uncontrollably. The following are some key features,

- Ivory Rubber Dam Forcep
- Replaceable spring
- Safe in handling
- Stainless steel
- Completely Sterilizable

CE-528

Restorative Instruments

Goldstein Composite Instruments #1 is used for all classes where a small, thin, delicate instrument is needed in combination with a small, rounded pluggler tip. Thinness of the blade allows for easy manipulation into the gingival sulcus. #1 is available in three designs.

#1 Standard - have 1.5mm rounded pluggler tip with 2mm thin blade

#1M Mini - is a delicate design with 1.25mm rounded pluggler tip with 1.5mm thin blade

#1MM Micro Mini - is most suitable for micro cavities with 1mm rounded pluggler tip & thin blade

Goldstein Composite Modelling Instruments are used for composite fillings with fine, TiNi (Titanium Nitride) Coated working ends. The Black Coating prevents composites from sticking to the instruments surface.

Black TiNi coating provides optimal edge retention, reduced light reflection and enhanced contrast and visual acuity at the surgical site and underlying tissue.

#4 Flexible, paired, offset, very thin 2.25mm paddle-shaped blades for placing and shaping material on posterior, mesial and distal surfaces. Reverse angle is also useful for placing and shaping anterior bonded restorations.

#4M Mini version of the #4 for placing and shaping material in difficult-to-access mesial and distal posterior restorations

#2 Small universal style with 1.75mm rounded plugger tip and a 2.75mm narrow paddle for initial and final placement and contouring of Class I, II and III restorations.

Goldstein Composite Modelling Instruments are used for composite fillings with fine, TiNi (Titanium Nitride) Coated working ends. The Black Coating prevents composites from sticking to the instruments surface.

#6 Goldstein Composite Carver with Large reverse angle tips make it easy to place fissures, grooves and pits creating the ideal occlusal anatomy in hard-to-reach posterior areas

#5 Goldstein Composite Carver with Small reverse angle tips make it much more efficient to place fissures, grooves and pits creating the ideal occlusal anatomy in hard-to-reach posterior areas.

Angled Cutting Edges of
Cavity Brushing Chisels

Wedelstaedt Chisel

These chisels are used to cleave undermined enamel and for shaping walls of the cavity preparations. It is available in three designs, curved small, curved large and straight. These can be use in three cutting movements, vertical, right and left.

Large diameter handle for enhanced ergonomics, tactile feel and optimal clinical performance. Longevity and corrosion resistance afforded by handcrafting from the finest grade surgical stainless steel.

Crown Remover - Trial Crown Remover Forceps

Probekronentfernungszange
Pinzas extractoras de coronas de prueba

These Trial Crown Removers are used permanent removal of crowns by breaking the seal between tooth and crown after sectioning with a bur.

This is the perfect instrument set for the careful and faultless removal of crown. These can be used for lower and upper jaws.

Made from surgical stainless steel.
Distance fixing crew allow gap adjustment.
Rubber jaws
Completely Sterilisable.

Orthodontic Instruments

Universal Cut and Hold Distal End Cutter

Universeller Cut & Hold Distalendschneider
Cortador universal para extremos distales de corte y sujeción

Universal Cut and Hold Distal End Cutter, with Long Handle & TC Inserts

Instrument Total Length is 13cm (5.1")

Both cutting edges are fitted with Tungsten Carbide Inserts

Designed to cut all types of wires ranging from .33mm (.012") to
.53 mm x .64 mm (.021" x .025")

CE-643

Universal Cut and Hold Distal End Cutter, 13cm

Pin & Ligature Cutter

Stift- und Ligaturschneider
Cortador de pasadores y ligaduras

Pin & Ligature Cutter, with Tungsten Carbide Inserts

Instrument Total Length is 12.5cm

Both cutting edges are fitted with Tungsten Carbide Inserts

Designed to cut soft wire pins and ligature wires up to .3mm (.012")

CE-644

Pin & Ligature Cutter, 12.5cm

Pin & Ligature Cutter - 50° Angle

Stift- und Ligaturschneider 50 Winkel
Cortador de pasadores y ligaduras de 50 ángulos

Pin & Ligature Wire Cutter - 50° Angle

Instrument Total Length is 14.5cm,
Cutting edges are angled at 50°
Both cutting edges are fitted with Tungsten Carbide Inserts
Designed to cut soft wire pins and ligature wires up to .3mm (.012")

CE-645

Pin & Ligature Wire Cutter - 50° Angle, 14.5cm

Ortho Pin & Ligature Cutter

Ortho Pin & Ligaturenschneider
Pin ortopédico y cortador de ligaduras

Ortho Pin & Ligature Wire Cutter, with Tungsten Carbide Inserts

Instrument Total Length is 12.5cm

Both cutting edges are fitted with Tungsten Carbide Inserts

Designed to cut soft wire pins and ligature wires up to .35mm (.014")

CE-646

Ortho Pin & Ligature Wire Cutter, 12.5cm

Bracket Removing Pliers, Straight

Klammerentfernungszange,STR
Alicates para quitar soportes,STR

Bracket Removing Pliers, Straight

Instrument Total Length is 13.5cm

Straight, suitable for wire size $\leq .022" \times .025"$ (.56 x .64 mm)

These Bracket Pliers work well for stainless steel, ceramic and plastic brackets for all types.

CE-647

Bracket Removing Plier, Straight,13.5cm

Direct Bond Attachment Removing Pliers - Angled

Direct Bond Attachment-Entfernungszange abgewinkelt
Fijación de enlace directo Extracción de pinzas en ángulo

Direct Bond Attachment Removing Plier, Angled

Instrument Total Length is 13.0cm

Angled head allow easy access to anterior and posterior attachments

Direct Bond Attachment Remover Plier (Angled) is designed to quickly and safely remove direct bond brackets.

CE-648

Direct Bond Attachment Removing Plier, Angled, 13.0cm

Weingart Utility Pliers - TC

Weingart Mehrzweckzange-TC
Alicates utilitarios Weingart-TC

Weingart Utility Pliers, Tapered 32° angular design

Instrument Total Length is 13.5cm

Versatile utility pliers are fitted with Tungsten Carbide Inserts

Tapered 32° angular design is convenient for placement and removal of archwires. Suitable for wire sizes up to wires up to .030" (.76mm).

CE-649

Weingart Utility Plier, 32° angular, TC, 13.5cm

Weingart Utility Pliers

Weingart Mehrzweckzange
Alicates utilitarios Weingart

Weingart Utility Pliers, Tapered 32° angular design

Instrument Total Length is 13.5cm

Versatile utility pliers are prepared with serrated jaws

Tapered 32° angular design is convenient for placement and removal of archwires. Suitable for wire sizes up to wires up to .030" (.76mm).

CE-650
Weingart Utility Plier, 32° angular, 13.5cm

Short Posterior Band Removing Pliers

Kurze Zange zum Entfernen des hinteren Bandes
Pinzas cortas para extracción de bandas posteriores

Cinch Back Pliers or Tie Back Pliers (NiTi Wires only)

Instrument Total Length is 13.5cm
The offset alignment of tip and occlusal pad is well suited for band removal.
These pliers come with the 3/16" pad already loaded in the working end.
Replacement pads can be re-ordered as needed

CE-651
Short Posterior Band Removing Plier, 13.5cm

Bird Beak Pliers

Vogelschnabelzange
Alicates de pico de pájaro

Bird Beak Pliers or loop forming pliers

Instrument Total Length is 12.5cm

One Round & One Pyramid working ends

Versatile loop forming pliers for round wires up to .76 mm (.030")

These Bird Beak pliers are used for orthodontic heavy wire bending

Round and pyramid beaks are smooth to prevent wire scoring

Can also be used to form springs

Handcrafted by the finest grade surgical stainless steel.

Corrosion resistance and completely sterilisable.

Round Beak

Pyramid Beak

CE-652
Bird Beak Plier, 12.5cm

Light Wire Bird Beak Plier With Groove

Leichtdrahtzange mit Vogelschnabel und Nut
Alicate de pico de pájaro de alambre ligero con ranura

Light Wire Bird Beak Plier, with One Groove

Instrument Total Length is 13cm

A longer cone than a standard bird beak is useful for forming precise loops in light wires up to .020" (.51 mm). The groove allows for locating and duplicating loops

Handcrafted by the finest grade surgical stainless steel.
Corrosion resistance and completely sterilisable.
